FRONTEND STACK

- React.js + Redux
- Material UI (MUI Pro)
- Okta / Auth Integration
- REST API Integration
- Figma → Code
- Inline Editing / DataGrid
- Multi-role Workflows
- Responsive UI

AI ENGINEERING STACK

- OpenAI APIs (GPT-4)
- LangChain / LangGraph
- FastAPI + Python
- RAG Pipelines
- Prompt Engineering
- Databricks / Claude API
- PostgreSQL + ORM
- JWT / RBAC Auth

INDUSTRY DOMAINS

- Venture Capital / FinTech
- Banking & BFSI
- Life Sciences / Healthcare
- Telecom
- Engineering

FREELANCE PROFILE

Full Stack AI Engineer and senior React specialist with 9+ years of enterprise experience. Recently delivered a production Activity Reporting & Portfolio Management platform for Bessemer Venture Partners (BVP) — a top-tier Silicon Valley VC firm managing \$20B+ AUM — integrating React frontend with Node.js APIs and Databricks/Claude AI backend over 5 months. At HCL, built an AI-powered claims processing system (React + FastAPI + LangChain + OpenAI) that cut processing time from 4 hours to 45 minutes. Available for remote freelance engagements targeting full-stack AI, agentic workflows, RAG pipelines, and enterprise React.

FEATURED FREELANCE PROJECT

Bessemer Venture Partners (BVP)

Venture Capital / FinTech

Dec 2024 – May 2025

Freelance Full Stack AI Engineer

React.js

Redux

MUI Pro DataGrid

Node.js

Databricks

Claude AI API

Okta Auth

PostgreSQL

Built a comprehensive Activity Reporting & Portfolio Management platform for BVP, enabling venture partners and operations teams to manage portfolio company KPIs, activity reports, financing rounds, and financial statements through a unified React interface.

What was built:

- Activity Reports Module — Full OPS-to-Partner workflow: create request → partner submission (multi-step form) → OPS review → approval. Inline editing, flag functionality, and document upload with error handling.
- Portfolio Management — Company-level portfolio table with all financial columns, inline editing, rank & grade enhancements, monthly burn rate parsing (string + number), and deal ID integration.
- AI/KPI Extraction — Integrated Databricks-hosted Claude AI API (claude-opus-4) for intelligent KPI extraction from portfolio company reports; custom KPI binding and correction workflows.
- Node.js Backend Integration — Connected React frontend to Node.js REST APIs backed by Databricks PostgreSQL; OAuth 2.0 token flow, CORS handling, and multi-environment API base URL configuration.
- Guided Tour & UX — Interactive onboarding tour for partner-flow; company overview & updates tabs; financing round and financial statement API integration.
- Okta SSO + RBAC — Enterprise authentication with role-based group routing for OPS, Partner, and Admin roles; MUI Pro DataGrid licensing.

AI ENGINEERING EXPERIENCE (FULL-TIME)

HCL Technologies — AI-Powered Claims Processing (GenAI POC)

Mar – Sep 2025

FastAPI

LangChain

OpenAI GPT-4

PostgreSQL

JWT + RBAC

React.js

- Built end-to-end AI claims processing system automating 60% of manual verification — React frontend + FastAPI backend + LangChain orchestration + OpenAI GPT-4 for document analysis.
- Designed fraud detection and escalation workflows achieving 92% precision in UAT; JWT + RBAC security layer with zero findings in security audit.
- Real-time operational dashboards for SLA compliance and team productivity monitoring across claims processing pipeline.

OTHER PROFESSIONAL BACKGROUND

HCL Technologies (Technical Lead, Feb 2022–Present) • TCS (Software Developer, Jul 2016–Feb 2022)

- 9+ years delivering enterprise React applications for Standard Chartered Bank, Deutsche Bank, British Telecom (2M+ users), and McDermott across Banking, Telecom, and Engineering domains.

WHY HIRE ME FOR FULL STACK AI FREELANCE

- **End-to-end AI delivery —**
Built React + FastAPI + LangChain + OpenAI systems in production — not just prompts, full pipelines.
- **Real VC-scale project —**
BVP (managing \$20B+ AUM) trusted me solo for 5 months — proof I work independently at enterprise standard.
- **AI + UI in one hire —**
Most AI engineers can't build the frontend; most frontend devs can't build the AI. I do both at \$60-70/hr.
- **Proven with Claude & Databricks —**
BVP backend ran Databricks-hosted Claude AI API — I know the modern AI infra stack, not just OpenAI wrappers.
- **9 years enterprise discipline —**
Fortune 500 banks (Deutsche Bank, Standard Chartered) trusted my code in production — same rigour on every freelance project.

WHAT I CAN BUILD FOR YOU

AI Chat & RAG Apps

Document Q&A, knowledge bases, semantic search using LangChain + OpenAI/Claude + vector DBs (Pinecone, pgvector).

Agentic Workflows

Multi-step AI agents using LangGraph/AutoGen — research agents, data extraction pipelines, automated reporting.

AI-Powered Dashboards

React + FastAPI dashboards with embedded AI features — like BVP's KPI extraction, insights, and smart analytics.

Full Stack AI Products

End-to-end: React frontend + FastAPI/Node.js backend + LLM integration + auth + DB — production-ready in weeks.

LLM API Integration

OpenAI GPT-4, Claude (Anthropic/Databricks), Gemini — streaming, function calling, structured outputs, cost optimisation.
